EDUCATION

Portland State University

Master's in Computer Science (GPA: **3.93**)

Portland, Oregon, United States

September 2023 – March 2025

VNUHCM University of Science

Bachelor's in Computer Science (GPA: **3.78**)

Ho Chi Minh, Vietnam

September 2018 – July 2022

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C/C++/C#, SQL, HTML/CSS, R, Rust, Haskell

AI/LLM Stack: LangChain, LangGraph, vLLM, HuggingFace, PyTorch, TensorFlow, MLFlow, Azure Bot Framework, OpenAI API

Frameworks: React, Vue.js, Node.js, Flask, Streamlit, Reflex Python

Cloud/DevOps: AWS (S3, Redshift), Azure (Databricks, DataLake), GCP (Vertex AI), Docker, Git, Airflow

Libraries: Pandas, NumPy, Scikit-learn, OpenCV, BeautifulSoup, Selenium

EXPERIENCE

Software Development Engineer

DH2i

May 2025 – Present

Clackamas, Oregon

- Optimized local LLM inference with vLLM, supporting 32+ concurrent requests and multi-token prediction (MTP).
- Integrated AI workflows into DxEnterprise, eliminating documentation overhead and accelerating feature deployment.
- Migrated legacy DxAdmin Windows app to Vue.js with enhanced visualization and AI capabilities.
- Automated support case analysis using Airflow to generate technical diagnoses and reduce manual review time.
- Implemented Model Context Protocol (MCP) server with code indexing and analysis to centralize codebase repos with 3rd party OAuth for access control, reducing context token usage and boost development speed.
- Patched DxEnterprise bugs and implemented enhancement features. (centralized logging, near command suggestion..)
- Implemented resume review workflow to grade application based on set criteria and experiences alignment with job description.

Machine Learning Engineer Intern

Conative AI

October 2024 – March 2025

Remote, New York

- Developed PyTorch-based time-series models for sales inventory prediction, effectively preventing stock-outs.

Front Desk Agent

University Place Hotel and Conference Center

April 2024 – Present

Portland, OR

Machine Learning Engineer

SoftwareOne Vietnam

November 2022 – July 2023

Ho Chi Minh, Vietnam

- Built time-series forecasting models (DeepVAR, Prophet) using AWS Redshift and S3 to predict monthly subscription trends.
- Engineered NLP pipeline (TF-IDF, LDA) to automatically tag and categorize workout XML data, enabling personalized user recommendations.
- Constructed scalable ML pipelines on Azure Databricks/Spark for credit card fraud detection, managing data versioning via DataLake Gen2.
- Deployed Azure Bot Framework chatbot integrated with ChatGPT, LangChain, and ChromaDB supporting natural language and SQL queries.
- Developed Streamlit dashboard to visualize database query results and model predictions for stakeholders.

Engineering Research Assistant

Katalon

April 2021 – July 2022

Ho Chi Minh, Vietnam

- Developed graph-based representation of Application Under Test (AUT) to automate test case generation and optimization.
- Reduced test execution time by 30% while maintaining fault coverage through optimized test set generation.
- Created interactive GUI for visualizing test results, exposing potential security threats and faults.

PROJECTS

News analysis and research | *CloakBrowser, LangGraph, SQLite, BeautifulSoup4, SMTP, Pinia, Vue.js, MOSS-TTS persona audio generation*

Stock market analysis and strategies simulation | *CloakBrowser, LangGraph, SQLite, LangSmith, yfinance, FinnHub, AlphaVantage, SMTP*

Dimensionality reduction comparison | *Python, Kaggle, CNN, LDA*

Lightweight real time hand gesture recognition | *CV, CNN, RNN, Python, Real-time inferences*

Prompt Image & Caption generator (GCP scalable app) | *GCP (Vertex AI, IAM, Buckets, Datastore, OAuth 2.0, Cloud Build)*

Game development:

3D Unity game | *3D modeling, animation, transition, sfx, game logic* | watch [trailer](#)

2D Rust game | *Sprite animation, game logic, sfx, lightweight*

AWARDS

MIT App Inventor (Community Award 2018)
